

LILY LAKE

T30 MD, Washington Co.
U.S.G.S. Peaked Mountain, ME (7 1/2')

Fishes

Smallmouth bass	Hornpout (bullhead)
Chain pickerel	Pumpkinseed sunfish

Physical Characteristics

Area- 32 acres	Temperatures
	Surface- 72°F
Maximum depth- 24 feet	23 feet- 51°F

Principal Fishery: Smallmouth bass

This small water is located slightly north of Route 9 (the "Airline"), several miles westerly of the Machias River. The lake is the site of Teco Lodge which is operated by the University of Maine Cooperative Extension Office during the summer months as a camp for children.

The lake was formerly managed for brook trout following reclamation. However, competing species re-established populations and the brook trout stocking program was terminated in 1971.

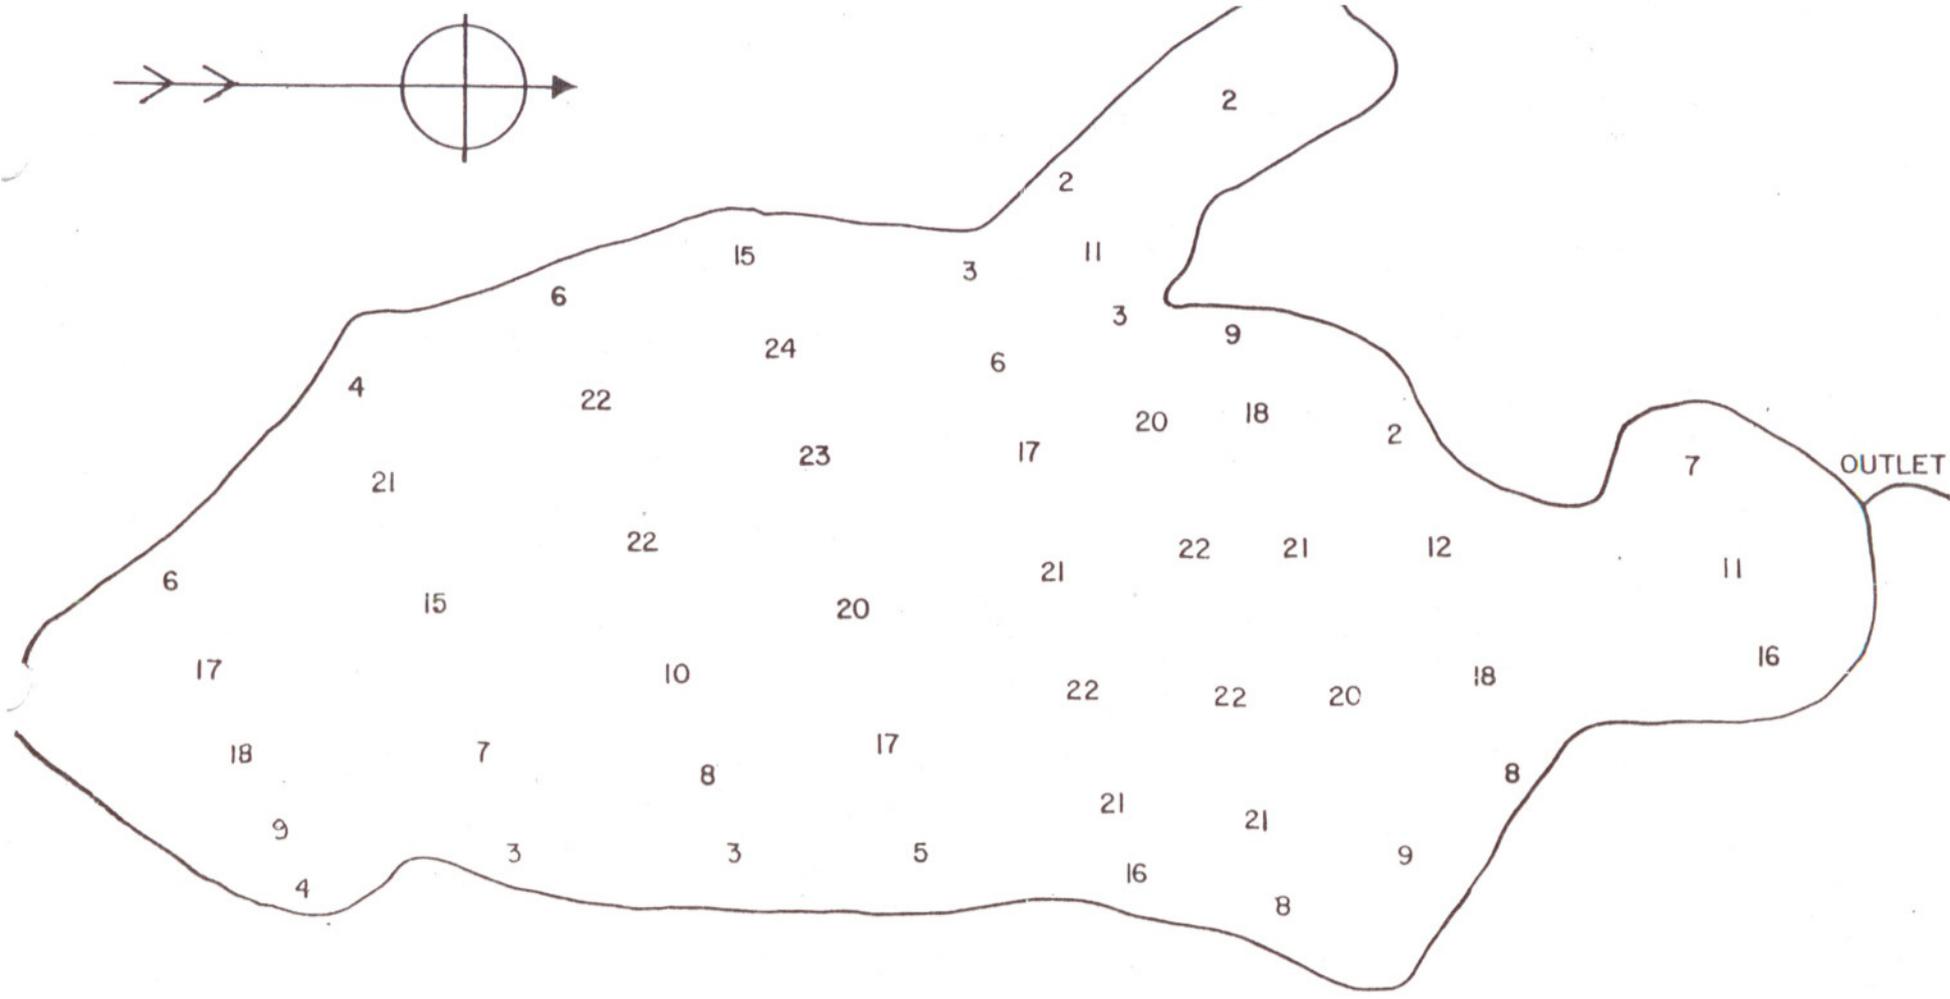

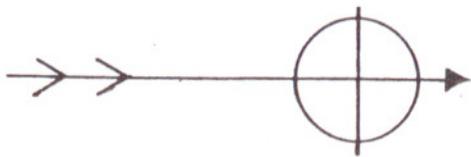

Smallmouth bass provide the main fishery. As a general rule, few smallmouths attain desirable sizes in a water this small. However, Lily Lake is the exception to the rule in that it produces some surprisingly large fish weighing from 2 1/2- 3 1/2 pounds in most years. Pickerel are uncommon due to a scarcity of suitable habitat.

Surveyed- August, 1957
